Pruning Measurement

Date of Measurement
(DD/MM/YY)

2/2/17

Mode of measurement

Specify the method used for pruning measurement

Per tree

One or several single trees selected. Biomass per tree collected manually and weighted

Number of trees : 3

Per parcel (e.g. 100m²) in bags

One or several parcels selected. Each parcel several trees. Biomass per parcel collected manually and weighted

Per several rows (or in whole field)

On large parcel, or a whole field is selected. Biomass collected and loaded to a truck. Weight of the load taken in a scale for trucks

Amount of prunings obtained (t/ha)

Specify the tonnes per hectare of prunings collected from the crop

3.45

Losses of prunings that weren't harvested (t/ha)

How many days the prunings were on soil before measuring (days)

Moisture content (%)

Specify the moisture content (%) of the biomass collected if available

Olive production every two years.Prunning operations are performed the same year when the olive is harvested.

Prunning operations are mixed (in this case removal of old branches + maintenance).

The large branches were measured seperately and their weight was 0.05 t..
