

Field data (Each questionnaire refers to one crop species cultivated per field)

Municipality : Zhytnyky village

Latitude : 48.765

Longitude : 27.436

Field Size (ha) 15

Crop Species

<input type="checkbox"/> olives	<input type="checkbox"/> vineyards	<input checked="" type="checkbox"/> apples	<input type="checkbox"/> pears
<input type="checkbox"/> peaches	<input type="checkbox"/> apricot	<input type="checkbox"/> nectarine	<input type="checkbox"/> plum
<input type="checkbox"/> cherries	<input type="checkbox"/> oranges	<input type="checkbox"/> tangerines	<input type="checkbox"/> lemons
<input type="checkbox"/> grapefruit	<input type="checkbox"/> hazelnuts	<input type="checkbox"/> chestnuts	<input type="checkbox"/> almonds

Variety of crop Slava Peremogy

Age of crop 45

Density (trees/ha) 330

Width between rows (m) 6.0

Distance between trees (m) 5.0

Crop form

Crop forms for vineyard

Vase

Espalier

Marquee

Crop forms for Olive

Ancient olives

Vase (1 stem)

Vase (2-3 stems from soil)

Bush (intensive 250-600 trees/ha)

Superintensive (>1500 trees/ha)

Crop forms for fruit trees

Natural

Vase

Bush/Globe (very small trees)

Spindle/Pyramid

Palm/Fan

Epsilon transversal

Slope (%)

5

---

Soil Cover

Bare.No grass cover.  
Tillage several times per year

Seasonal occurrence.  
Herbicides+mowing  
<50% soil cover

>50% grass cover.  
Mowed several times per year

100% Grass cover.  
Mowed several times per year

### Crop Yield

Average Crop yield (t/ha)

---

Irrigation

rain fed

partial irrigation

fully irrigated

Intensification degree

Specify the amount of fertilizer and pesticides

organic

low

intermediate

high

## Plantation Removal Information

- Were the plants removed at a typical age for such crops ?
- Yes
  Older than typical  
 Younger than typical
  Don't know
- Reason for plantation removal
- Old age (renovation)
  Change of crop  
 Change of variety
  Change of planting pattern  
 Plant disease
- Equipment for plantation removal
- Felling with chainsaws  
 Uprooting whole tree with excavators  
 Shredding the whole tree (shredder mounted in front of tractor)

**Intended use of the plantation**  
 Check how do you manage/use the plantation removal wood for each part of the plantation. Check as many as apply

	Roots	Stems	Thick branches	Fine branches
Abandoned at field side	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Burnt in fires at open air	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Mulched as soil cover	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Shredding and integration to soil	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Firewood	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Energy	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Processed into pellets	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>

Specify the minimum diameter you consider for 'thick' branches used as firewood (mm)

50 \_\_\_\_\_

Cost for removing 1 hectare when contracted to a company (€/ha)

\_\_\_\_\_

## Mechanized Collection

### Plantation Removal Method

Check according to the figures below the uprooting method that is used.

Aerial part of the tree felled by operators with a chainsaw

Aerial part of the tree felled with a machinery

Only roots treated with an excavator/tractor with showel

Full tree up-rooted with excavator

**Preparation of the wood prior to treatment** Specify the method that plantation removal are prepared prior to treatment

No preparation - Trees are felled/up-rooted and left to be gathered by chipper

Trees in piles

Roots in piles

Trees are felled/up-rooted and left to be gathered by chipper

In case roots were collected for producing wood, did the operators shake the whole tree/roots stocks to detach soil before piling or treatment ?

Yes

No

### Specifications of preparation processes of biomass

Specify the manpower, productivity, fuel consumption needed in order to prepare the plantation removal for treatment

Check as many as apply

Processes	Manpower (Nr of persons)	Gross working time (hr/ha)	Productivity (t/ha or t/hr)	Fuel consumption (l/hr)
Up-rooting whole trees (tree+root)	<input type="checkbox"/>			
Felling the trees	<input checked="" type="checkbox"/> 1	4	6 t/h	12.5
Up-rooting roots	<input type="checkbox"/>			
Preparing piles	<input checked="" type="checkbox"/> 12	32	0.8 t/h	1.3

### Type of plantation treatment and model of machinery

Specify the method that plantation removed are treated based on the outcome product and manufacturer-model of each machinery (crusher, shredder, chipper) that is used if applicable.

Specify the theoretical-from 'catalog' volume of plantation per hour that can be processed by the machinery.

Check as many as apply

Crusher - Large pieces after breaking tree/roots

Crusher (manufacturer-model) \_\_\_\_\_

Farmer \_\_\_\_\_

Shredder - Produce finer material (hammers or knives, not clean cut)

Shredder (manufacturer-model) \_\_\_\_\_

Farmer \_\_\_\_\_

Farmer's community \_\_\_\_\_

Chipper - Clean cut. Resembles the typical form of forest woodchips

Chipper (manufacturer-model) \_\_\_\_\_

Hemmel RM41

Farmer \_\_\_\_\_

Farmer's community \_\_\_\_\_

**Treatment methods**

Check according to the figures below the treatment method that is used for the plantation removal biomass.

Check the process used for either "A":aerial part of the tree, "R":roots or "B": when both aerial part and roots (all tree) is processed together. IF A and R are collected and processed separately, check the corresponding boxes for each case.

Processes	Manpower (Nr of persons)	Productivity (t/ha or t/hr)	Fuel consumption (l/hr)
 Treatment of material with primary crushers	A <input type="checkbox"/> R <input type="checkbox"/> B <input type="checkbox"/>		
 Treatment of material with screening	A <input type="checkbox"/> R <input type="checkbox"/> B <input type="checkbox"/>		
 Treatment of material with shredders/chippers	A <input type="checkbox"/> R <input type="checkbox"/> B <input type="checkbox"/>		
 Treatment of material with shredders/chippers with horizontal feeding table	A <input type="checkbox"/> R <input type="checkbox"/> B <input type="checkbox"/>		
 Chipping of crunched pieces in a static chipper	A <input checked="" type="checkbox"/> R <input type="checkbox"/> B <input type="checkbox"/>	2	3 t/h

**End product properties**

Specify the properties (moisture,bulk density,particle size,ash) of the prunings after treatment and harvesting, if known

Moisture (% a.r.)	<u>34</u>	Particle size (cm)	<u>                    </u>
		Bulk density (kg/m3)	0.32
			Ash conten
Losses of biomass after harvesting	(%)	<u>10-15</u>	or (tonnes/ha) <u>                    </u>

Problems encountered due to the field

- Soil uneven
- Stones

- Slope
- Topography

Problems encountered by the machines

Not suitable for the pruning

Manouvering

Unsuitable feeding system (biomass difficult to be conveyed)

Too much soil particles with the biomass to be treated

Problems in discharge

manual load

Performance of the machinery

The machinery was performing better than expected

The machinery was performing normally-typical expected

The machinery was underperforming

### Value Chains

Indicate if your experience is based on an isolated test or if it based on an existing value chain:

My experience is just an experimental trial-machinery test

My experience is part of an existing value chain
