Pruning Measurement

Date of Measurement
(DD/MM/YY)

2011

Mode of measurement

Specify the method used for pruning measurement

Per tree

One or several single trees selected. Biomass per tree collected manually and weighted

Per parcel (e.g. 100m²) in bags

One or several parcels selected. Each parcel several trees. Biomass per parcel collected manually and weighted

Per several rows (or in whole field)

On large parcel, or a whole field is selected. Biomass collected and loaded to a truck. Weight of the load taken on a scale for trucks

Amount of prunings obtained (t/ha)

Specify the tonnes per hectare of prunings collected from the crop

2.11

Losses of prunings that weren't harvested (t/ha)

How many days the prunings were on soil before measuring (days)

Moisture content (%)

Specify the moisture content (%) of the biomass collected if available
