

Field data (Each questionnaire refers to one crop species cultivated per field)

Municipality : Cerignola

Latitude : 41.310463

Longitude : 15.875549

Field Size (ha) 1

Crop Species

<input checked="" type="checkbox"/> olives	<input type="checkbox"/> vineyards	<input type="checkbox"/> apples	<input type="checkbox"/> pears
<input type="checkbox"/> peaches	<input type="checkbox"/> apricot	<input type="checkbox"/> nectarine	<input type="checkbox"/> plum
<input type="checkbox"/> cherries	<input type="checkbox"/> oranges	<input type="checkbox"/> tangerines	<input type="checkbox"/> lemons
<input type="checkbox"/> grapefruit	<input type="checkbox"/> hazelnuts	<input type="checkbox"/> chestnuts	<input type="checkbox"/> almonds

Variety of crop Coratina

Age of crop 40

Density of crop (trees/ha) 85

Width between cultivated rows (m) 11.0

Distance between trees (m) 11.0

Crop form

Crop forms for vineyard

Vase

Espalier

Marquee

Crop forms for Olive

Ancient olives

Vase (1 stem)

Vase (2-3 stems from soil)

Bush (intensive 250-600 trees/ha)

Superintensive (>1500 trees/ha)

Crop forms for fruit trees

Natural

Vase

Bush/Globe (very small trees)

Spindle/Pyramid

Palm/Fan

Epsilon transversal

Slope (%) 0

Soil Cover

Bare.No grass cover.  
Tillage several times per year

Seasonal occurrence.  
Herbicides+mowing  
<50% soil cover

>50% grass cover.  
Mowed several times per year

100% Grass cover.  
Mowed several times per year

### Crop Yield

Average Crop yield (t/ha) 2.55

Crop yield before measurement (t/ha) 3.80

Amount of product obtained for the year that the pruning measurement is performed in tonnes per hectare

Irrigation  rain fed  partial irrigation  fully irrigated

Intensification degree  organic  low  intermediate  
Specify the amount of fertilizer and pesticides  high

## Pruning Operations Performed

Type of pruning

- |   |  |
|---|--|
| <input checked="" type="checkbox"/> Maintenance<br><input type="checkbox"/> Structuring<br><input type="checkbox"/> Removal of old branches | <input type="checkbox"/> Grafting<br><input type="checkbox"/> Topping<br><input type="checkbox"/> Blooming |
|---|--|

Pruning Method

- |  |  |
|--|--|
| <input checked="" type="checkbox"/> Only manually<br><br><input type="checkbox"/> Fully mechanised | <input type="checkbox"/> Mechanised pre-pruning + manual |
|--|--|

### Pruning Operations

Specify the pruning operations that are carried out. Check as many as apply.

- Manually shears

- Assisted shears

- Chainsaw/armchainsaw

- pre-pruner:hedge trimmer

- pre-pruner:discs

- pre-pruning topping

Season of pruning

- |                                    |                                   |                                   |   |
|------------------------------------|-----------------------------------|-----------------------------------|---|
| <input type="checkbox"/> January   | <input type="checkbox"/> February | <input type="checkbox"/> March    | <input checked="" type="checkbox"/> April |
| <input type="checkbox"/> May       | <input type="checkbox"/> June     | <input type="checkbox"/> July     | <input type="checkbox"/> August           |
| <input type="checkbox"/> September | <input type="checkbox"/> October  | <input type="checkbox"/> November | <input type="checkbox"/> December         |

Frequency of pruning

- annual     
  biannual     
  biennial     
  Once per years

## Mechanized Collection

Preparation of the field prior to harvesting

No preparation - prunings were left on the soil as they fall from tree

Centre-operator position prunings on the center of the lane between tree rows

Centre aligned-operator position prunings in a specific position in center (e.g. aligned with the direction of the row)

Previous windrowing-a tractor with windrower is used prior pruning harvester

Integrated windrower to the pruning machine

## Harvesting methods

Check according to the figures below the harvesting method that is used for the pruning biomass

	Manual cross-cutting of firewood+gathering at field side	<input type="checkbox"/>
	Forestry chipper towed by tractor + manual feeding	<input type="checkbox"/>
	Hauling the branches + shredding/chipping at field side	<input type="checkbox"/>
	Hauling the branches + baling at field side	<input type="checkbox"/>
	Harvest with mulcher/chipper in front	<input type="checkbox"/>
	Harvest with mulcher/chipper at rear	<input type="checkbox"/>
	Harvest with rear mulcher/chipper and bin	<input checked="" type="checkbox"/>
	Harvest with rear mulcher/chipper and big-bags	<input type="checkbox"/>
	Automotive shredder/chipper with rear trailer	<input type="checkbox"/>
	Harvest with standard hay baler	<input type="checkbox"/>
	Harvest with rear baler prepared for wood or tree branches	<input type="checkbox"/>
	Pre-pruning integrated with collection and mulching/chipping	<input type="checkbox"/>
	Pre-pruning integrated with collection and mulching/chipping in an automotive machine	<input type="checkbox"/>

**Type of pruning treatment and model of machinery**

Specify the method that prunings are treated based on the outcome product and manufacturer-model of each machinery (windrower,mulcher,chipper,baler) that is used if applicable

Windrower-Machines that align biomass in a row

Windrower (manufacturer-model) \_\_\_\_\_

Mulcher-big pieces. Machines that break the branches in big pieces. Normally they are an evolution from the typical mulchers/crunchers utilised to leave the branches on the soil in pieces.

Mulcher (manufacturer-model) \_\_\_\_\_

Shredder - Produce finer material (hammers or hammers with a knife.Do not produce a clear cut)

Shredder (manufacturer-model) FACMA - Combi TR 140 e TR 200

Chipper - Clean cut. Resembles the typical form of forest woodchips

Chipper (manufacturer-model) Caravaggi BIO 1250

Round bale

Baler (manufacturer-model) \_\_\_\_\_

Squared bale

Baler (manufacturer-model) \_\_\_\_\_

**Processes Specifications**

Specify the specifications of the processes (manpower, gross working time, productivity, fuel consumption)

Check as many as apply

Processes	Manpower (Nr of persons)	Gross working time (hr/ha)	Productivity (t/ha or t/hr)	Fuel consumption (l/hr)
Manual Alignment	<input type="checkbox"/>			
Windrowing	<input checked="" type="checkbox"/>	1	3	
Integrated harvesting/treatment	<input checked="" type="checkbox"/>	2	2	2.5 t/h
Hauling	<input checked="" type="checkbox"/>	1	0.5	10
Treatment at field side	<input type="checkbox"/>			
Disposal/dumping of biomass	<input checked="" type="checkbox"/>	1	1	5

**End product properties**

Specify the properties (moisture, bulk density, particle size, ash) of the prunings after treatment and harvesting, if known

Moisture (% a.r.)	21	Particle size (cm)	P100
Bulk density (kg/m <sup>3</sup> )	150	Ash content (% dry basis)	3.2

**Losses of biomass after harvesting**

(%) 5 or (tonnes/ha) \_\_\_\_\_

**Problems encountered due to the field**

- Soil uneven  Slope  
 Stones  Too much grass

**Problems encountered by the machines**

- Not suitable for the pruning  Manouvering  
 Unsuitable feeding system (biomass difficult to be conveyed)  Too much soil particles with the biomass to be treated  
 Problems in discharge

**Performance of the machinery**

- The machinery was performing better than expected  
 The machinery was performing normally-typical expected  
 The machinery was underperforming

**Value Chains**

Indicate if your experience is based on an isolated test or if it based on an existing value chain:

- My experience is just an experimental trial-machinery test  
 My experience is part of an existing value chain

## Contact Data

Name : Antonio Dinisi

Email : \_\_\_\_\_

Phone : \_\_\_\_\_

Profession : agro-mechanical service

Country : company  
Italy

Demonstration activity performed by DARE in the framework of uP\_running project.
